

## GET THE FULL STORY

### Viewmaster gives you real-time recording with no missing frames

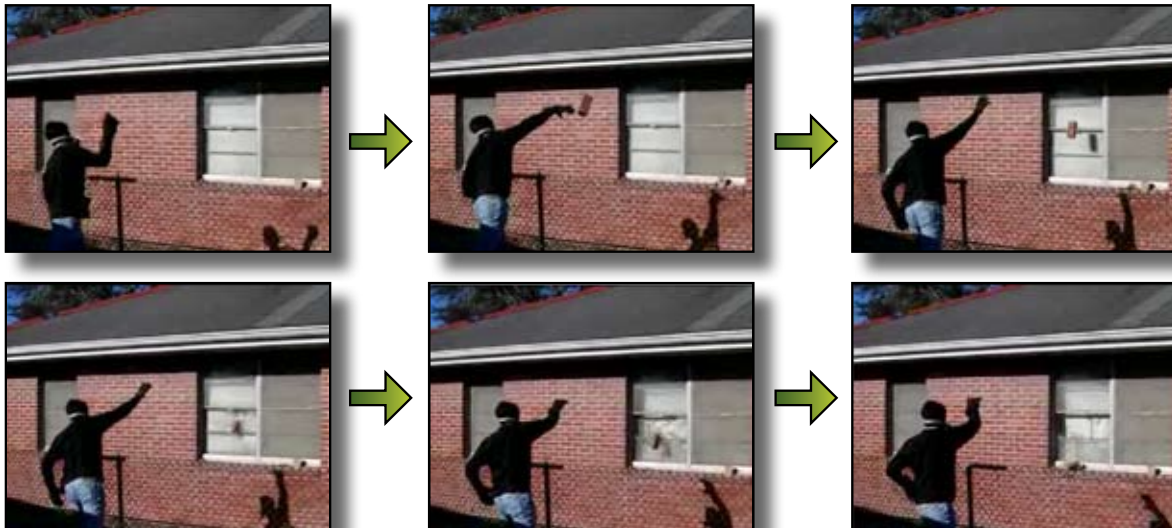

Multiple camera CCTV systems use just one digital chip for eight or even sixteen cameras. The result is the jerky movement during playback that's so familiar with CCTV. The jerkiness makes it difficult to pinpoint an exact moment of action.

ViewMaster, new from Verdant Technologies, records at an amazing 200 images per second by using one chip per camera. That means eight separate video channels per eight camera card.

#### Ideal For:

Schools	Behavioural monitoring and site security in one package.
Pubs and clubs	Where the action is fast.
Warehouses	Remote monitoring and stand alone recording in one package.
Retail Outlets	Discrete viewing from your store computer.

Because ViewMaster uses one chip per camera and records up to 25 frames per second on multiple cameras ...

**... You can see all of the action**

Multiplexed systems share a single chip between cameras and update more slowly...

**... So you can miss vital details**

ViewMaster also has an impressive range of features. Ask for our full Technical Specification for more details.

## Feature Summary

<b>Easy backup and replay of incidents</b>	The player is embedded in the incident file. Just double click to replay on most Windows XP computers.
<b>ViewMaster grows with you as your needs change: Upgrade from 8 to 24 camera inputs in a single unit.</b>	Add up to 3 additional 8 channel camera cards (see below) to upgrade your system in easy steps from 8 to 24 camera inputs.
<b>Unlimited number of remote users</b>	So no more frustration when the maximum number of network users is exceeded.
<b>Portable remote viewing</b>	Automatically download the embedded control via internet/network to view live and recorded cameras in Internet Explorer.
<b>High quality images for evidential use</b>	Records full video frame at 640x480 pixels.
<b>Fast update for remote monitoring</b>	New H.264 video compression designed for variable bandwidth networks, such as internet, gives fast frame update.
<b>Flexible recording options</b>	Movement based, continuous or scheduled to record what you want, when you want.

Multi-camera display with live image viewing.

Each camera card records up to eight video cameras.

Available in small footprint, industrial or tower units.
